

### TECHNICAL DATA

**Operating range:**

from 6 to 100 m<sup>3</sup>/h with head up to 60 metres.

**Liquid temperature range:**

from -10 °C to +50 °C for KE 36/200 and KE 40/200,  
from -15 °C to +80 °C for the other pumps.

**Pumped liquid:** clean, free of solids and abrasives, non-viscous, non-aggressive, non-crystallised and chemically neutral, with properties similar to water.

**Maximum ambient temperature:** +40 °C.

**Maximum operating pressure:**

KE 36/200, KE 40/200, KE 55/200: 8 bar (800 kPa)  
KE 40/400, KE 50/400, KE 30/800, KE 40/800, KE 50/800, KE 20/1200,  
KE 25/1200, KE 35/1200: 10 bar (1000 kPa)

**Protection class at the terminal board:** IP 55.

**Protection class:** IP 44

**Insulation class:** F.

**Installation:** normally in horizontal or vertical position, provided that the motor is always above the pump.

### APPLICATIONS

Single-impeller centrifugal pump suitable for domestic, civil, industrial and agricultural systems, and for decanting, mixing and irrigation uses.

### CONSTRUCTION FEATURES OF THE PUMP

Pump body and motor support in cast iron.

Technopolymer or cast iron impeller, as per the TECHNICAL DATA table.

Carbon/ceramic mechanical seal.

### CONSTRUCTION FEATURES OF THE MOTOR

Closed asynchronous type, external ventilation cooling.

Rotor running on ball bearings, oversized to ensure low noise and durability.

Construction according to CEI 2-3.

Controlled by MCE inverter.

**Standard single-phase voltage:** 1x230 V / 50-60 Hz

**Special version on request:** three-phase 3x400 V / 50 Hz, or three-phase 3x460 V / 60 Hz

**Standard three-phase voltage:** 3x400 V / 50 Hz

**Special version on request:** 3x460 V / 60 Hz

# KE SINGLE-IMPELLER

## SINGLE-IMPELLER CENTRIFUGAL ELECTRIC PUMPS WITH MCE/P INVERTER

### MCE/P INVERTER

#### CONSTRUCTION FEATURES OF THE ELECTRONICS: MCE/P INVERTER

The inverter continuously adjusts the rotation speed of the electric pump, keeping the pressure constant, even when the flow rate varies.

The other electric pumps, also with variable speed, are activated in cascade after the first one has reached maximum speed. Through modulation, they compensate the pressure fluctuations of the system.

For every operating cycle, it is possible to switch the restart to a different pump, therefore ensuring even use of all electric pumps.

It is possible to set operation times for each individual pump, switching to another pump after such set times.

The "SP" pressure can be adjusted by the user using the "+" and "-" keys found on the MCE/P (as a rule, all the pumps are set to the same pressure value). With the new MCE/P, it is sufficient to set the data on one of the devices, and it will be automatically propagated to the other pumps of the system.

### MODES OF OPERATION

PERFORMANCE CURVES WITHOUT INVERTER

PERFORMANCE CURVES WITH INVERTER

The inverter is capable of maintaining a constant pressure even when the flow rate varies.

The operating pressure can be adjusted by the user.

A good pressure set-point is between 1/3 and 2/3 of the maximum head of the electric pump. In this way, high efficiency of the pump is maintained, together with maximum saving.

In addition, the MCE/P does not block the pump if the pressure is not reached, but the flow is present. This prevents service interruptions in case of high flows.

**For more information refer to the technical appendix.**
