1. Product description

Applications

Grundfos circulator pump types UPS and UPSD are designed for the circulation of liquids in heating and air-conditioning systems. Pumps with bronze pump housings are suitable for circulation in domestic hot water systems.

UPS, UPSD are a complete line of circulator pumps with three speeds.

UPS, UPSD pumps are available as single-head or twin-head pumps.

Below you'll find general examples of systems for which UPS, UPSD pumps are suitable.

Heating systems

- One- and two-pipe heating systems
- Main pumps
- Zone pumps
- Boiler shunt pumps
- Pumps for heating surfaces
- Calorifers
- Underfloor heating systems
- Solar heating systems
- Geothermal heating systems
- Heat recovery systems.

TM01 0168 0697

Domestic hot water systems

- Domestic hot water systems.

TM01 0169 0697

Cooling and air-conditioning systems

- Two-pipe air-conditioning systems
- Main pumps
- Zone pumps
- Pumps for refrigeration units
- Heat pump systems
- Geothermal heating systems
- Heat recovery systems.

TM01 0170 0697

Type key

Example	UPS	(D)	65	-60	(/2)	F(-)	280
Type range

3. Functions

Speed switch

The pump offers three speeds for adjustment of pump performance to the system in question.

TM00 9247 4595

Fig. 1 Pump performance at the three speeds

The speeds of the various speed switch positions are shown in the table below:

Switch position	Speed in % of maximum speed	
	Single-phase pumps	Three-phase pumps
1	approx. 60 %	approx. 70 %
2	approx. 80 %	approx. 85 %
3	100 %	100 %

Change to a lower speed enables reduction in energy consumption and less noise in the system.

Fig. 2 Indicator lights on terminal box

TM00 9747 0602

Standard module

The module is standard in single-head pumps and is also available for twin-head pumps.

Connect the pump to the mains via an external contactor. Connect the contactor to the pump's built-in thermal overload switch to protect the pump against overload at all three speeds.

TM00 9237 0602

Fig. 3 Standard module

Standard module indicator lights

The function of the indicator lights on the terminal box is as shown in the following tables.

Single-phase pumps

Single-phase pumps incorporate a green indicator light only:

Indicator light	Description
On	The power supply has been switched on.
Off	The power supply has been switched off.

Three-phase pumps

Three-phase pumps incorporate a green and a red indicator light:

Indicator lights		Description
Green	Red	
Off	Off	The power supply has been switched off.
On	Off	The power supply has been switched on.
On	On	The power supply has been switched on. The direction of rotation is wrong.

Protection module

TM01 3879 4798

Fig. 4 Protection module

The protection module is supplied as an accessory for single-head and twin-head pumps.

When fitted with a protection module, the pump can be connected to an external switch directly, as the built-in protection against overheating protects the pump at all three speeds. Furthermore, the module has two indicator lights.

Protection module indicator lights

The function of the indicator lights is shown in the table below.

Indicator lights		Description
Green	Red	
Off	Off	The pump has been stopped. The power supply has been switched off, thermally cut out or a phase is failing.
On	Off	The pump is operating.
On	On	Three-phase pumps only: The pump is operating, but the direction of rotation is not correct.
Off	On	The pump has been cut out by the thermal switch.

Note: Pumps with protection module must not be connected to a frequency converter.

Relay module

The relay module is standard in twin-head pumps and an optional extra for single-head pumps.

The module enables direct connection of the pump to an external mains switch and an external operating or fault indication device. The signal output for an external signal device can be set to activation during operation or fault by means of the selector switch.

As standard, the signal outputs of relay modules in twin-head pumps are interconnected so that the pumps are operating alternately as duty pump and standby pump.

The pump is connected directly to the mains as the pump incorporates overload protection at all three speeds. If the pump has been cut out by the thermal overload switch, it will restart automatically when it has cooled to normal temperature, provided the external on/ off contact is closed.

TM00 9236 4596

Fig. 5 Relay module

Relay module indicator lights

The indicator lights on pumps with relay module have more detailed operating and fault indications.

All pumps with relay module have a green and a red indicator light. Their functions are as shown in the table below.

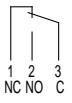

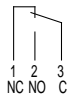

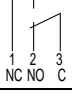

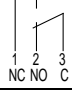

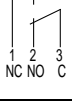

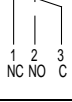

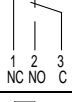

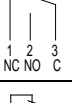

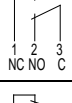

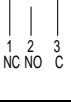

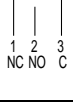

Signal output

The relay module has a signal output for external operating or fault indication.

By means of the selector switch, the output can be used as:

- Operation signal output between terminals 2 and 3 or
- Fault signal output between terminals 1 and 3.

Functions of indicator lights and signal output

Indicator lights		Signal output		Description
Green	Red	Operation	Fault	
Off	Off			The pump has been stopped. The power supply has been switched off or a phase is failing.
Permanently on	Off			The pump is running.
Permanently on	Permanently on			Only three-phase pumps: The pump is running, but with wrong direction of rotation.
Off	Permanently on			The pump has been cut out by the thermal overload switch.
Flashes	Off			The pump has been stopped by an external on/off switch.
Flashes	Permanently on			The pump is or has been cut out by the thermal overload switch and it has been stopped by an external on/off switch.

Note: Pumps with relay module must not be connected to a frequency converter.

Operating modes of twin-head pumps

Twin-head pumps have a relay module in both terminal boxes, which are interconnected by a 4-core cable.

TM00 9243 4101

Fig. 6 Twin-head pump

In addition to the signal functions, the signal output of the relay module for twin-head pumps can be used for controlling the operating mode of pump 1 and 2.

It is possible to choose between three operating modes:

- **Alternating operation (factory setting)**
The pumps operate alternately as duty and standby pump, respectively. Changeover takes place every 24 hours. If the duty pump is cut out due to a fault, the standby pump will automatically start. During changeover both pumps will be running for a short period to ensure a low-noise changeover.
- **Standby operation**
The pumps operate continuously as duty and standby pump, respectively. If the duty pump is cut out due to a fault, the standby pump will automatically start at a signal from the output of the duty pump. The sequence can be changed to make the standby pump operate as duty pump.
- **Single-pump operation**
The pumps run independently without communicating with each other.

4. Operating conditions

Pumped liquids

Thin, clean, non-aggressive and non-explosive liquids, not containing any solid particles, fibres or mineral oil. In domestic hot water systems, it is advisable to use bronze pumps only for water with a degree of hardness lower than approx. 14 °dH. For water with a higher degree of hardness, use a close-coupled pump type TP.

If the pump is installed in a heating system, the water should meet the requirements of accepted standards on water quality in heating systems, e.g. the German standard VDI 2035.

The pumps **must not** be used for the transfer of inflammable liquids such as diesel oil and petrol.

UPS and UPSD pumps can be used for pumping water/glycol mixtures up to 50 %. The maximum viscosity of a 50 % glycol mixture at -10 °C is approx. 32 cSt.

Note: When pumping glycol mixtures, the pump performance will be reduced.

To prevent the glycol mixture from degrading, avoid temperatures exceeding the rated liquid temperature and minimise the operating time at high temperatures. It is important to clean and flush the system before the glycol mixture is added.

To prevent corrosion or precipitation, the glycol mixture should be checked and maintained regularly. If further dilution of the supplied glycol is required, follow the glycol supplier's instructions.

Temperature limits

- Ambient temperature: 0 °C to 40 °C
- Liquid temperature
 - for short periods: +140 °C
 - continuously: -10 °C to +120 °C
 - domestic hot water: up to +60 °C
- Storage temperature: -30 °C to +55 °C.

Depending on the cast-iron version and the pump application, the maximum liquid temperature may be limited by local regulations and laws.

System and inlet pressures

Relative humidity: Max. 95 %.

Sound-pressure level: The sound-pressure level of the pump is lower than 41 dB(A) (reference: 20 mPa).

Test pressure:

- PN 6: 10 bar ~ 1.0 MPa
- PN 10: 15 bar ~ 1.5 MPa
- PN 6/10: 15 bar ~ 1.5 MPa.

Test liquid: +20 °C water containing corrosion inhibitor.

Inlet pressure

To avoid cavitation noise, the following minimum pressures are required at the pump suction flange:

Pump type	Liquid temperature		
	75 °C	90 °C	120 °C
	[bar]/[MPa]	[bar]/[MPa]	[bar]/[MPa]
UPS, UPSD			
32-60 F 220	0.05/0.5	0.20/2.0	1.50/15.0
32-120 F 220	0.40/4.0	0.70/7.0	1.95/19.5

Electrical data

Supply voltage and frequency:	1 x 230-240 V, 50 Hz 3 x 400-415 V, 50 Hz
Motor protection:	The pump requires no external motor protection, if the motor is fitted with a protection module.
Back-up fuse:	Max. 10 A
Enclosure class:	IPX4D
Insulation class:	F, H
Screwed cable entries:	1 x M20 for mains connection. 1 x M20 for signal output (blanked-off if pump with standard module). 1 x M16 for capacitor connection (only single-phase pumps).
EMC (electromagnetic compatibility):	EN 61 000-6-2 EN 61 000-6-3

Thermal overload switch

Voltage	250 V AC
Current	cos φ = 1.0: 2.5 A cos φ = 0.6: 1.6 A

Relay module

Start/stop input

External potential-free contact

- Maximum load: 250 V, 1.5 mA
- Minimum load: 100 V, 0.5 mA

Operating/fault signal output

Internal potential-free changeover contact

- Maximum load: 250 V, 2 A, AC
- Minimum load: 5 V, 100 mA, DC

5. Construction

The UPS, UPSD pumps are of the canned rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.

Attention has been focused on using as few materials as possible, and the use of materials that might cause problems in connection with disposal have been omitted.

The pump offers these features:

- three-speed motor
- ceramic radial bearings
- carbon thrust bearing
- stainless-steel rotor can, bearing plate and rotor cladding
- aluminium-alloy stator housing
- cast iron or bronze pump housing
- stator with built-in thermal overload switch.

12	Split cone	Stainless steel	1.4305
13	Impeller	Stainless steel	1.4301
14	Nut	Stainless steel	1.4305
15	Neck ring	Stainless steel / PTFE	1.4301

Pos.	Description	Material	DIN/EN
		Cast iron	EN-JL-1040 EN-GJL-250
16	Pump housing	Bronze CuSn10Pb	2.1050.01 DIN 1705
17	Anti-friction ring	PTFE	
	Nonreturn flap (Twin-head pumps)	EPDM rubber	
19	Splash protector	Stainless steel	1.4305

6. Installation

The pump must be installed with horizontal motor shaft.

Fig. 8 Flow direction

Note: Twin-head pumps in vertical pipes with downward liquid flow or in horizontal pipes must always run at maximum speed.

Twin-head pump mounted in horizontal pipes must be fitted with an automatic air vent in the upper part of the pump housing.

Terminal box positions

Fig. 9 Standard terminal box positions

Fig. 10 Permissible terminal box positions of single-head pumps

Fig. 11 Permissible terminal box positions and flow direction of twin-head pumps

Electrical connection

The electrical connection and protection should be carried out in accordance with local regulations.

Earthing or neutralization can be used for protection against indirect contact. A current- or voltage-operated earth-leakage circuit breaker can be used as extra protection.

Never make any connections in the pump terminal box unless the power supply has been switched off.

The pump must be earthed and connected to an external mains switch.

The operating voltage and frequency are marked on the pump nameplate. Make sure that the motor is suitable for the power supply on which it will be used.

Pumps with standard module

The pump must be connected to the mains via an external contactor. The contactor is to be connected to the pump's built-in thermal overload switch at terminals T1 and T2 to protect the pump against overheating at all three speeds.

Note: If the pump is also protected by means of a motor starter, the starter must be set to the current consumption of the pump at the chosen speed. The motor starter setting must be changed every time the pump speed is changed. The current consumption at the various speeds is stated on the pump nameplate.

External impulse switches

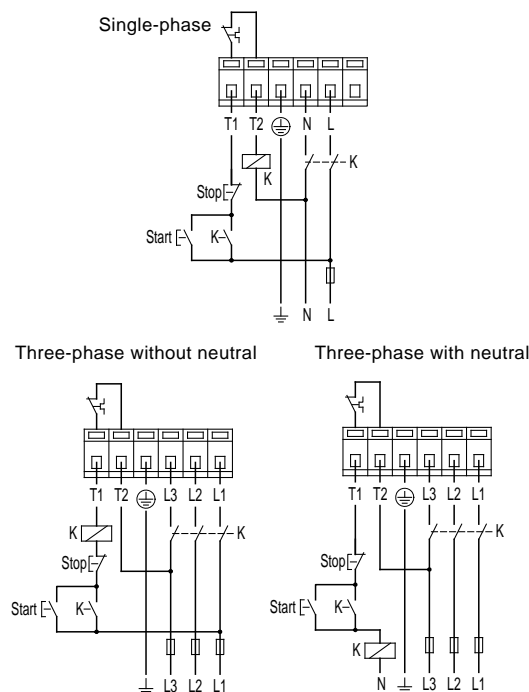

Fig. 12 External impulse switches

External changeover switch

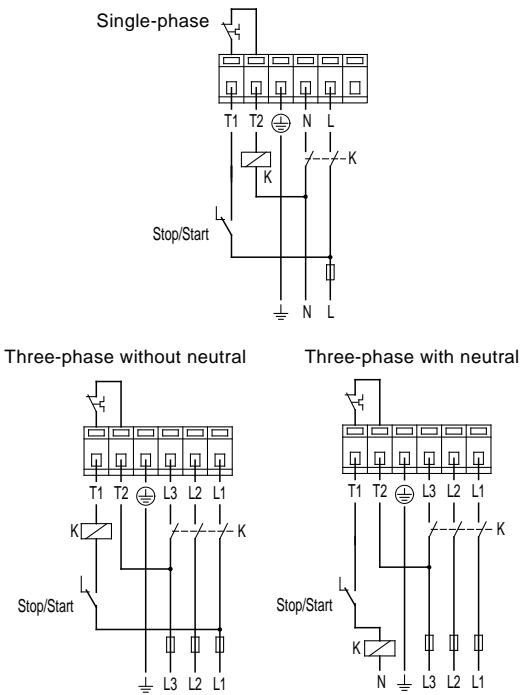

Fig. 13 External changeover switch

Single-head pumps with protection module

The pump can be connected directly to the mains as the pump features built-in protection against overheating at all three speeds.

The figure below shows the electrical connection of single-phase and three-phase pumps.

Fig. 14 Electrical connections, protection module

Single-head pumps with relay module

The pump can be connected directly to the mains as it incorporates protection against overheating at all three speeds.

The relay module has a signal output for an external operating or fault signal device. By means of the selector switch the signal output can be used as operation or fault signal output:

Operating indication

TM01 3402 0305

TM00 9175 0305

Twin-head pumps with relay module

The pumps are interconnected by a 4-core cable and factory-set to operating alternately as duty and standby pump. Changeover takes place every 24 hours. The following figures shows the electrical connections and the selector switch setting for the various operating modes.

Alternating operation (factory setting)

Fig. 17 Alternating operation

Standby operation

Standby operation with pump 1 as duty pump and pump 2 as standby pump.

Note: In this operating mode the selector switch of pump 2 must not have been set to alternating operation.

Fig. 18 Standby operation

Standby operation with pump 2 as duty pump and pump 1 as standby pump.

Note: In this operating mode the selector switch of pump 1 must not have been set to alternating operation.

Fig. 19 Standby operation

In the case of single-pump operation the cable between the pumps must be removed. The pumps must be set individually and connected separately to mains, see page 13 *Single-head pumps with relay module*.

Signal output of twin-head pumps

The signal output of twin-head pumps can be used directly, provided it is not already being used for communication between the pumps.

If an output that is used for communication between the pumps is to be used as signal output, an intermediate relay is required. See example below.

The example shows a single-phase pump in alternating operation with external fault indication in case of fault on pump 2 or both pumps.

7. Performance curves and technical data

Curve conditions

The guidelines below apply to the performance curves in the following data sheets:

- Due to the danger of overheating the pumps must not be used at a flow below $0.1 \times Q$ at best efficiency point.
- The bold parts of the curves show the recommended performance range.
- Test liquid: Airless water.
- The curves apply to a liquid temperature of 20 °C.
- All curves show average values and should not be used as guarantee curves. If a stated minimum performance is required, individual measurements must be made.

- The conversion between head H [m] and pressure p [kPa] has been made for water with a density of $\rho = 1000 \text{ kg/m}^3$. For liquids with other densities, e.g. hot water, the discharge pressure is proportional with the density.

Power curves, efficiency curves and electrical data for twin-head pumps apply to single-pump operation.

Speed

The table below shows the speed range of the various pump types and speed switch positions.

Pump type	Speed [min^{-1}]											
	Test voltage, 1 x 230 V						Test voltage, 3 x 400 V					
	Voltage range, 1 x 230-240 V						Voltage range, 3 x 400-415 V					
	Speed 1		Speed 2		Speed 3		Speed 1		Speed 2		Speed 3

10. Accessories

The following accessories are available for UPS, UPSD pumps:

- protection module
- relay module for single-head pumps
- relay module kit for twin-head pumps
- counter flanges (standard on pumps for the UK)
- insulation kit (only single-head pumps)
- base plate (only single-head pumps)
- blanking flanges (only twin-head pumps).

Counter flanges

A counter flange kit includes these parts:

- two flanges with internal thread (ISO seal thread) or two flanges for welding/soldering
- two gaskets
- bolts.

Pumps with cast iron pump housing

Pump type	Pressure stage	Size	Product number
UPS/UPSD 32	PN 10	Rp 1 1/4	539703
		32 mm	539704
UPS/UPSD 40	PN 10	Rp 1 1/2	539701
		40 mm	539702
UPS/UPSD 50	PN 10	Rp 2	549801
		50 mm	549802
UPS/UPSD 65	PN 10	Rp 2 1/2	559801
		65 mm	559802
UPS/UPSD 80	PN 6	Rp 3	569902
		80 mm	569901
	PN 10	Rp 3	569802
		80 mm	569801
UPS/UPSD 100	PN 6	Rp 4	579901
		100 mm	579902
	PN 10	Rp 4	579801
		100 mm	579802

Pumps with bronze pump housing

Pump type	Pressure stage	Size	Product number
UPS 32	PN 10	Rp 1 1/4	96427029
		32 mm	96427030
UPS 40	PN 10	Rp 1 1/2	539711
		40 mm	539712
UPS 50	PN 10	Rp 2	549811
		50 mm	549812
UPS 65	PN 10	Rp 2 1/2	559811
		65 mm	559812
UPS 80	PN 6	Rp 3	96405735
		80 mm	569911
	PN 10	Rp 3	569812
		80 mm	569811
UPS 100	PN 6	Rp 4	96405737
	PN 10	Rp 4	96405738

Rp: Flange with internal thread (ISO seal thread).

mm: Flange for welding/soldering.

Protection modules

Voltage [V]	Product number
1 x 230-240	96422219
3 x 400-415	96422221

Relay module

Relay modules for single-head pumps.

Voltage [V]	Product number
1 x 230-240	96406611
3 x 400-415	96406609

A relay module kit for twin-head pumps includes these parts:

- two relay modules with screws and screwdriver
- two screwed cable entries
- one intermediate cable
- two wiring diagrams for terminal box covers.

Voltage [V]	Product number
1 x 230-240	96409231
3 x 400-415	96409229

Insulation kits

Single-head pumps can be fitted with an insulation covering made of expanded polypropylene, EPP.

The insulation kit, which is tailored to the individual pump type, has an insulating thickness corresponding to the nominal diameter of the pump.

The thermal conductivity of EPP is very low (0.04 W/m °C), i.e. the insulating property is very good.

The insulation kit encloses the entire pump housing. It consists of two or three parts which are easily fitted around the pump.

11. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the Grundfos Product Center website. At the top, there is a navigation bar with the logo and menu items: HOME, FIND PRODUCT, COMPARE, YOUR PROJECTS, SAVED ITEMS, HELP. Below this is a search bar with a 'SEARCH' button and a placeholder text: 'Input a product number or a whole or partial product name'. The main content area features four large buttons: 'SIZING' (Enter pump sizing), 'CATALOGUE' (Products and services), 'REPLACEMENT' (Replace an old pump with a new), and 'LIQUIDS' (Find pump by liquid). Below these is a 'QUICK SIZING' section with input fields for 'Flow (Q)*' (m³/h) and 'Head (H)*' (m), and radio buttons for 'Select what to size by': 'Size by application', 'Size by pump design', and 'Size by pump family'. A 'START SIZING' button is also present. At the bottom of the screenshot, there are links for 'ADVANCED SIZING' with options for 'Advanced sizing by application' and 'Guided selection'.

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

CATALOGUE gives you access to the Grundfos product catalogue.

LIQUIDS enables you to find pumps designed for aggressive, flammable or other special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.

Subject to alterations.
